

Ergonomic Assessment

Ensuring your employees are safe and healthy and maintaining a work environment and work conditions that minimise risk free can be a very daunting task.

Konekt's Ergonomic Assessments are designed to assist you in preventing injury within your workplace through a comprehensive process of education and review. Our ergonomic service involves the evaluation of an employee and their interaction within their workstation and physical environment, work systems or processes, the tasks of their job, as well as any tools of the trade required to perform the role.

The Ergonomic Assessment consists of:

- A professional assessment by one of our qualified and experience occupational therapists, physiotherapist or ergonomist
- Training on good posture and safe work practices
- The identification of hazards and recommendations for controlling the risks within the workplace
- Adjustment of furniture and equipment to meet each employees specific requirements
- Workstation modification and recommondation of suitable furniture if required.

By adopting the principles set out within the Program, you'll ensure that your employees have the knowledge and the skills to; prevent workplace injury, minimise the reoccurrence of injury, reduce lost time and increase productivity.

Konekt's Ergonomic Assessment aims to recognise potential risk factors for your employees while also providing them with strategies to minimise the risk of injury.
