

Initial Workplace Conference

Is early recovery and return to work of injured employees critical to your business?

Interventions which assist injured workers to achieve early recovery and return to work are critical in minimising claims durations and costs. Konekt's unique Initial Workplace Conference offers significant benefits for facilitating early return to work, in addition to providing recommendations on the sustainability of employment for the injured.

One of the primary objectives of Konekt's Initial Workplace Conference is to help identify suitable duties for candidates while also developing a return to work program. Other critical elements the program addresses include:

- Identifying, and reality testing the mechanism of injury
- Developing future risk management strategies
- Undertaking an evaluation of medical interventions
- Identifying any barriers that may delay return to work (physical and psychosocial factors)
- Negotiating with treating medical practitioners.

The Process

Konekt's Initial Workplace Conference approaches return to work cases through a process of consultation, negotiation and recommendation. Following the initial meeting, a return to work plan which is agreed to with the treating practitioner, is supplied within 24 hours of the workplace meeting.

In certain cases where significant barriers to return to work are identified, a Konekt Recovery Consultant may be appointed to facilitate a sustainable return to work program. Recommendations may include further medical assessment or treatment.

Being the largest provider of workplace health solutions in Australia ensures that Konekt is able to deliver direct, timely intervention through work-based activities with the expertise of the right consultant with the specific injury, each and every time.

Konekt's Initial Workplace Conference helps identify suitable duties for candidates while also developing a return to work program.
